Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

The indicated allowability of claim 4 is withdrawn in view of the newly discovered reference(s) to Szarka et al., U.S. 2002/0148615. Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hernandez et al., US 2004/0000407 in view of Szarka et al., U.S. 2002/0148615.

Hernandez et al. discloses a mandrel (16), a packing element inherently included in the completion in figure 5, a flapper valve (14), tab (26), recess (31), spring (not shown, 0019), hinge (24) and a curved shape providing adaptation precluding relative rotation between it and the mandrel. Hernandez et al. does not disclose the flapper being non-metallic. Szarka et al. teaches use of a flapper being constructed from composites and plastics [0010] to facilitate milling or drilling out the valve. It would have been obvious to one having ordinary skill in the art at the time of the invention to arrange for the valve disclosed by Hernandez et al. to be formed from non-metallic composite or plastic as taught by Szarka et al. to facilitate milling or drilling it out. The

use of a known material based on its suitability for the intended use is a design consideration known to one having ordinary skill in the art.

Allowable Subject Matter

Claims 1, 2, 6-15 and 20-40 are allowed.
